Cost-effective conservation of amphibian ecology and evolution. ... We draw attention to the critical need for amphibian conservation efforts in Atlantic Forest, and to the critical fact that ~90% of FD, PD, and TD remain outside the PAs. Conservation strategies such as PES are essential to maintain the ecological and evolutionary process.

2. Ecology and conservation of amphibians in urban and suburban landscapes 2.1. Habitat availability. The maintenance and survival of amphibian populations in urban and suburban landscapes requires the availability of suitable aquatic habitats, such as a waterbody (pond, dam or lake), wetland (swamp, marsh) or stream, and terrestrial habitats (Wells, 2007).

Amphibian species that are habitat generalists or have relatively low dispersal requirements appear to be better able to survive in urban and suburban landscapes. There is insufficient information on the ecology of amphibians in urban and suburban areas, particularly in the tropics and sub-tropics, despite worldwide declines reported over past decades.

Genomics has great potential to advance understanding of amphibian evolution, ecology, and behavior, as well as to improve conservation of this highly imperiled class of vertebrates. However, application of new massively parallel sequencing technology to amphibians lags behind its application to other vertebrates, due in part to their large, repetitive genomes, making genome assembly challenging.
