Modbus is restricted to addressing 254 devices on one data link, which limits the number of field devices that may be connected to a master station (once again, Ethernet TCP/IP being an exception). Modbus transmissions must be contiguous, which limits the types of remote communications devices to those that can buffer data to avoid gaps in the transmission.

Modbus For Field Technicians  
CAS Modbus Scanner is a utility to retrieve coils, inputs, holding registers, and input registers from a Modbus-enabled device. This utility can also discover Modbus devices on your network if you do not know their address. It works by testing every address, function, length, and offset to check for exceptions or responses.
