NON INVASIVE CARDIAC OUTPUT MONITORING, A CLINICAL EXAMPLE ...

A simple, safe, reliable and cheap non-invasive cardiac output monitor would reduce the need to expose this group of patients to the risks involved in the use of the pulmonary artery catheter. Several techniques have been described but none has yet been accepted as an alternative to the pulmonary artery catheter.

Currently, monitors are available capable of continuously measuring the cardiac output of the patient non-invasively. That is, it can be measured, for example, by cutaneous electrodes, digital inflatable cuffs or photospectrometry sensors. Or, through a minimally invasive, option that is also possible.
