CORE

The primary outcome was fasting behaviour, defined as fasting or not fasting. Secondary outcomes of this study were preterm delivery and birth weight as they had previously been reported to be associated with Ramadan fasting [2–4, 8]. Preterm delivery (PTD), was defined as birth before gestational week 37 + 0.

If fasting is the main mechanism through which Ramadan affects academic performance, our results are informative about the relation between nutrition and educational outcomes. Based on previous research, we hypothesize that observing Ramadan, and especially observing the fast, will have a negative impact on participants' academic achievement.
